Plant what you want!

Plant what you want and protect it with DeerTech!

Our program integrates patented ultrasound technology, a customized approach, personalized services and industry-leading expertise.

How It Works

Our Three Circles of Protection are proven to effectively protect valuable shrubs and plants from hungry deer. The patented combination of sound, treatment, and switching things up is far more effective than fencing or treatments alone.

★ Sound

Patented units emit ultrasonic sounds, unnoticeable to humans, but piercing to deer. The sound prevents them from hearing anything else, including predators, which makes them feel unsafe and encourages them to move on.

★ Treatment

DeerTech's proprietary treatment program was developed in conjunction with a wildlife biologist. The program incorporates a series of organic solutions comprised of natural ingredients that add to the deer's feeling of unease.

★ Switch

Deer are smart and able to adapt. While the combination of sounds and treatments does create an effective barrier, over time, some deer can learn to adapt to these elements. So, for the best level of protection, we switch things up. DeerTech's specialists continually change things — incorporating new scents, sounds and positioning to keep deer off balance.

Each customized program is based on extensive knowledge of deer habits and observations of how they act in and around each individual property.

USA Today, The Wall Street Journal, The New York Times and many other local papers have acknowledged DeerTech's unique solution and recognized our team as 'the' deer deterrent expert.

Sound

Ultrasonic frequencies make deer feel unsafe.

Treat

Proprietary treatments disrupt eating.

Switch

The system is regularly changed to counter adaptation.

"Before DeerTech we tried everything with no success. After having the DeerTech system installed and the monthly sprays, we have plants we never imagined possible. Our landscaping looks amazing, and was recently featured in 'Green Scene', the Pennsylvania Horticulture Society magazine."
- Mark and Paula S., Gladwyne, PA

"I had never been able to plant tulips in the past without having them destroyed by deer. This spring, I woke up every morning to see if the tulips were still there and they were. My azaleas have also gone untouched."
- Christine S., Greenwich, CT

"The service provided by your Deer Advisor has been a major part of a very positive experience with your company. He has been knowledgeable and diligent in making sure we're continuing to have good results. He should be commended."
- Nadine L., South Salem, NY
