

# The Green Choice For Lawn Care™

## Responsible lawn care now for a healthier environment later.

SavATree can customize a lawn care program that fits your lawn's needs as well as your environmental preferences. Select an organic program, a traditional program, or a combination of the two.

*Call today for a complimentary lawn care consultation with SavATree's fully trained and certified professionals.*

## A Green, Healthy Lawn is the Ultimate Welcome Mat

Professional lawn care performed by certified lawn care specialists and highly trained crews can help you achieve a plush, green lawn that is naturally more resistant to disease, insects and weeds.

Whether you need immediate help treating a lawn issue like fungus, brown spots and bare patches or if you are interested in a long-term program that will improve the overall health and vigor of your lawn, SavATree can help.

Our Lawn Care Program begins with a professional analysis of the condition of your soil and turf. We then work with you to customize a program of specially formulated nutrients, minerals, organics and slow release fertilizers.

## Organic Lawn Care

Now more than ever, people are opting for natural and organic solutions for everything from food to landscaping materials. That's why SavATree offers an organic lawn care program that uses natural materials, including those allowed for use in the USDA National Organic Program (NOP). We can help you decide which lawn care program is right for you.

## Are spots, weeds, bare patches or lawn fungus making it tough for you to grow grass?

Sounds like you need a lawn disease diagnostician! There may be an insect or disease compromising your turf, or perhaps thatch buildup or problems with drainage. A soil analysis may be in order, but first have a lawn care expert walk your property with you to see the problems first hand, and discuss your priorities for a lawn care program.

## Are insects or disease preventing your grass from growing?

Maybe you see them, maybe you don't-but damage from disease and insects can rob a lawn of its natural beauty, texture and lushness. If you suspect insect or disease, notice brown areas, black spots on grass blades, or bare areas — your lawn needs help. Although lawn recovery takes commitment, the results are worth it. Regular, ongoing lawn care treatments can help restore your lawn's natural beauty, making it a beautiful backdrop for your landscape!

- Soil analysis and aeration
- Weed control
- Custom blend fertilizer
- Lime application
- Insect control and grub management
- Lawn disease treatment

"Thank you for coming to our home yesterday to give us an evaluation on some of our trees, bushes and lawn. You always educate us on how to improve our landscape endeavors. We also want to let you know how pleased we are with the improvement to our lawn after just one year of service. It was looking pretty pitiful this time last year.

**Jerry and Sue Fink**

"Keep up the good work! I'm extremely pleased. My lawn was terrible before you took over. Now it's beautiful."

**Andrea Kalan**

SavATree has local offices throughout the county.
