

Do You Need a Tree Partner?

SavATree is The Green Choice for tree, shrub, and lawn care™.

Experienced and Skilled Arboriculture Experts

Ensuring the sustainability and longevity of landscape architects' designs and installations requires an experienced environmental partner. SavATree offers its clients over 25 years experience in tree, shrub, and lawn care administered by knowledgeable certified arborists and technicians.

Our expertise spans a comprehensive range of services including tree health assessments, preservation and removal, onsite arboricultural management, and corrective measures like disease treatments, just to name a few. SavATree currently operates in ten states and caters to all property types, including residential, commercial, and municipal.

On-Site Evaluations and Maintenance Plans

SavATree works very closely with landscape architecture professionals in all phases of projects. Most often, a SavATree arborist collaborates in the design phase, working together to evaluate the existing site and designate installation specifications. This site evaluation process includes tree health assessments to determine what trees can and should be maintained in relation to their impact on the overall sustainability of the project.

Post-construction, we are often contracted as the plant health care company – especially in the case of a complicated tree plan – to implement a long-term maintenance plan for the optimal treatment of the trees. This is especially important during the critical acclimation period when trees need proper nutrients and pruning and may be more susceptible to insects and disease.

Benefits of Partnering with SavATree

SavATree distinguishes itself from other tree and lawn care companies in one important way – we offer customers truly customized solutions through our unique company offerings. First, we use a proprietary software package that allows arborists to create customized plans by analyzing customer-specific variables and needs. Second, we offer hybrid programs to accommodate customers who desire an organic program but have site issues such as infestation, which cannot be solved by completely organic treatments. Lastly, SavATree provides "spot" care; our highly specialized technicians use state-of-the-art equipment to spot treat specific problem areas. Through this innovative method, small site problems are fixed with the proper materials (versus treating an entire site with whatever materials are on hand). SavATree continually invests in people, equipment, and software – setting us apart from other companies.

Green Credentials

Another unique feature of SavATree is our "green" credentials. From our inception, we have sought out less intrusive methods of doing business and managing the environment. Following this tradition, we pursued the EPA's National Environmental Performance Track program, which incorporates a rigorous credentialing system. A complete list of credentials, accreditations, and awards – as well as our environmental policy – is available online.

Landscape architects are ideal partners for our services since both groups share a passion for preserving the environment. SavATree participates in over 70 regional events each year, lending financial and human support to help residents learn, appreciate, and celebrate the beauty of their community's natural environment.
