

Tree, Shrub and Lawn Care for Your New Home

When you move into a new home, there are so many things to do! Your SavATree arborist can help by developing a cost effective restoration and maintenance program based on your personal preferences and customized to meet your landscape's needs. Our program will make your property healthy and beautiful and protect your investment. We start with a complimentary survey that familiarizes you with the species and conditions of the trees and shrubs in your collection. This consultation includes the following categories:

Some of our services include...

- Artistic & maintenance pruning
- Cabling, bracing & takedowns
- Insect, mite and disease treatments
- Deer taste repellent
- Custom blend fertilization
- Soil ammendments
- Organic tick treatments
- Winterization
- Safety auditing
- Professional lawn care
- Organic & hybrid options
- 24-hour emergency service

Pruning

Professional pruning will improve the health and appearance of your trees and eliminate any hazards that may be present. SavATree crews are also proficient at vista pruning, which makes the most of surrounding views while maintaining privacy, and developmental pruning of young specimen trees to ensure proper growth.

Hazard Reduction

Cabling and bracing are proven methods to strengthen a tree's structure thereby increasing its longevity and storm damage resistance. Our certified arborists evaluate the lightning risks on your property and make recommendations for securing your favorite trees. When it is necessary to remove a tree in order to ensure safety within a landscape, our crews are highly skilled at dismantling trees... especially those that are close to homes or valuable plantings.

Prevention & Monitoring

Your trees and shrubs are vulnerable to many threats including insects, mites and disease, just to name a few. SavATree can help. Our certified arborists will diagnose conditions that put your trees at risk and prescribe treatment options. In many cases, we can also make recommendations to help minimize these threats or bolster your tree's defenses against them. Many of our

treatments are made from botanical ingredients designed to work with nature. Preventative and curative treatments protect your landscape investment from insects, mites, diseases, deer browsing, sunscald and windburn.

Nutrients

Trees and shrubs require a minimum of 16 nutrients and rich, lively soil to grow and maintain their vitality. In the forest, their natural environment provides the nutrients they need. However, natural nutrient sources are often removed from your landscape, forcing trees and shrubs to compete for the nourishment they need to stay healthy. SavATree helps by utilizing exclusive products introduced through a subsurface liquid fertilization process. Our nutrients include ArborKelp®, a sea kelp-based biostimulant used to promote root growth and increase stress tolerance, and ArborHealth®, our slow-release organic blend of micro and macro nutrients.

The Green Choice™

Balancing your landscape needs and preferences with a combination of natural and responsible choices can effectively be accomplished with SavATree's environmentally sensible programs. We promote sustainable landscapes, using environmentally sound practices and the least intrusive methods in landscape care to enhance the natural beauty and health of your living environment. We regularly evaluate new products and their efficacy and the impact on the environment. Organic tree care and lawn care programs are available as well as hybrid options that are sure to match your preferences.

Tree, Shrub and Lawn Care for Your New Home (cont.)

Customized, flexible lawn care programs

At SavATree, we develop each program individually, according to the needs of your lawn. We provide responsible care for your turf and customer service excellence through one Lawn Care Consultant who will develop a working relationship with you in order to ensure your complete satisfaction.

Advanced technology & sensible methods

Our trucks are equipped with the latest technology that truly allows your service to be customized to the lawn conditions that are present at the time of service. With the touch of a button we adjust each application to the specific needs of your lawn including making spot treatments, and treating sun and shade areas accordingly.

We offer Organic, All-Nutrient and Integrated lawn programs as well as hybrid options. The following are optional services available:

- slice seeding
- lime/sulfur
- core aeration
- soil testing
- grub control
- Weed treatments

Here is a checklist to help
you choose your tree, shrub
and lawn care service
company:

- ✓ **Knowledgeable, qualified...**
